Pishpirik – UX Scenario

App ID: **al.pishpirik.game** · Version 1.0.4 · Type: Web app · Resolutions: 1920×1080 and 1280×720 · Platforms: webOS 4.0 (2018) and later · Languages: English and Albanian

Overview

Pishpirik is a traditional Albanian two-player card game. The user plays against the computer, plays online against a random person without an account (“Play Online”, cross-play with phones, computers and other TVs), or signs in and plays online with friends added by username. The whole app is operated with the remote control.

Remote key	Action
Arrow keys	Move the gold focus frame between buttons, fields and the cards in your hand
OK	Activate the focused button / play the focused card
BACK	Close the open dialog (in the player search: cancel the search); in a game, return to the menu; on the start screen, exit the app (webOS platformBack)
Magic Remote pointer	Focus follows the pointer; click = OK

No in-app purchases. No advertising. No adult content (rated 12+ because of the optional text chat in online games).

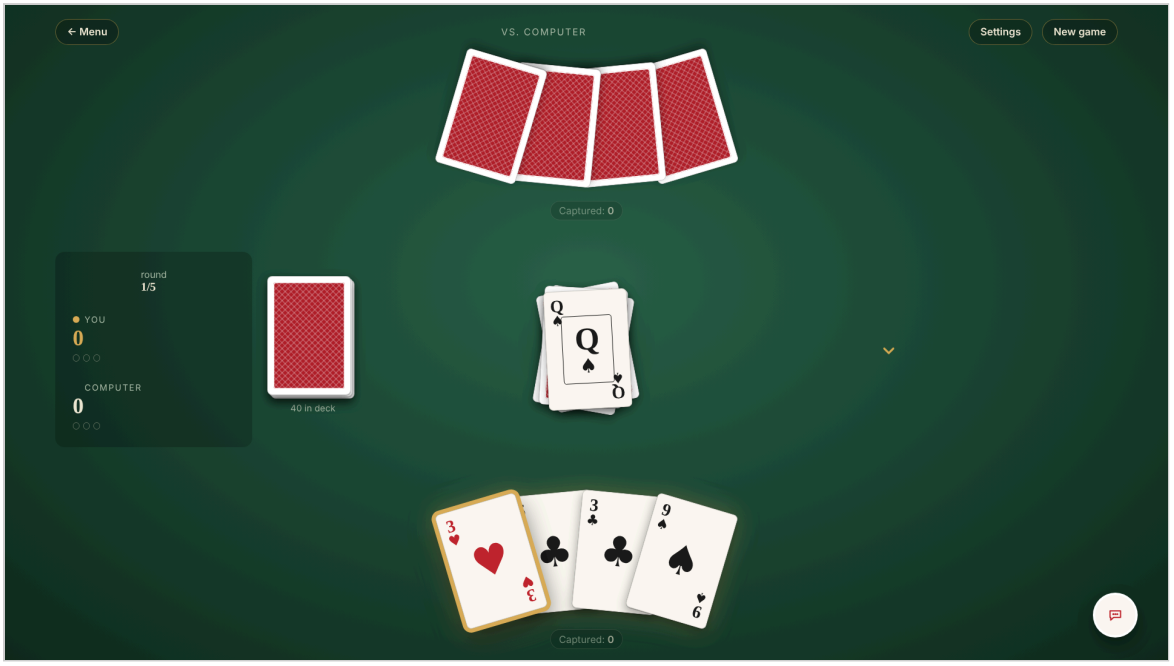

1. Start screen

Shown at launch. Focus starts on **“Play vs Computer”**.

- **Play vs Computer**: opens round selection, then starts a game against the computer. No login.
- **Play Online**: searches for another person who pressed the same button on any device. No login. See section 5.
- **Sign in / Create account**: sign in or create an account (username + password) for playing with friends.
- **Gear icon** (top right): Settings.
- **BACK**: exits the app.

2. Game table

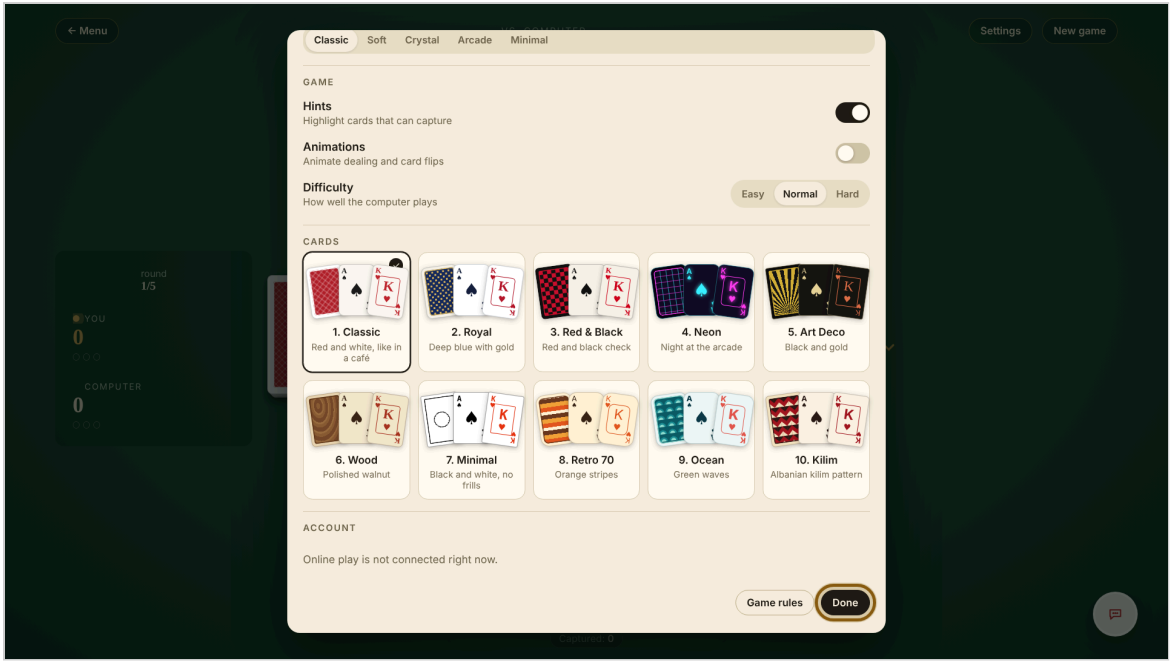

Left: score and round. Top: opponent's cards (face down). Middle: deck and pile. Bottom: your hand.

- LEFT/RIGHT choose a card, OK plays it onto the pile.
- Same rank as the top card, or a Jack, captures the pile. Capturing a single card = “Pishpirik!” (+10).
- UP reaches **Menu**, **Settings** and **New game** / **Leave game**.
- Chat button (bottom right) is only for online games.
- BACK returns to the start screen (in an online game against a random person this also leaves the game).

When the round ends, a summary dialog shows the points; OK starts the next round.

3. Settings

- Sound on/off, volume, 5 sound styles.
- Card highlight hints, animations, computer difficulty (easy / normal / hard).
- 10 card designs.
- Account: change password, sign out.
- **Language**: English / Shqip (Albanian). The app starts in English, or in Albanian when the TV language is Albanian; the choice is remembered.
- “Done” or BACK closes the dialog.

4. Rules

Opened from Settings → “Game rules”. Explains the rules (English or Albanian). “Close” or BACK closes it.

5. Play Online (no account)

1. Start screen → DOWN to **“Play Online”** → OK. The search dialog shows a timer; focus is on **“Cancel”**.
2. On a second TV, a phone or a PC browser (https://pishpirik26.github.io/pishpirik/) press **“Play Online”** (“Luaj me dikë” in Albanian) as well. Within a few seconds the game starts on both devices (3 rounds).
3. If nobody else is searching, the dialog keeps waiting (there is no computer fallback). OK on “Cancel” or BACK cancels the search.
4. Players are shown with a generated name, e.g. “Player 4F2K” (“Lojtar 4F2K” in Albanian).

6. Login and online play with friends (optional)

Accounts are only needed for playing with friends. Sign-up is free and instant inside the app: it needs only a username and a password, no e-mail or personal data, so the tester can create the test accounts directly.

1. Start screen → tab **“Create account”** → enter any username (3–16 letters/numbers, e.g. lgqa1) and a password (6+ characters) twice → OK on **“Create account”**. The friends screen opens.
2. On a second TV or a PC browser (https://pishpirik26.github.io/pishpirik/) create a second account the same way (e.g. lgqa2).
3. Account 1: in **“Add friend”** type the second username → **“Add”**. Account 2 accepts the friend request in **“Friend requests”**.
4. Account 1 selects the friend and sends a game invite, choosing the number of rounds. Account 2 accepts it in **“Game invite”**. The game starts on both devices.
5. During the game the Chat button (bottom right) opens quick emoji, phrases and short text.
6. Settings → Account: change password or sign out (“Sign out”).
