Pishpirik – UX Scenario

App ID: **al.pishpirik.game** · Version 1.0.2 · Type: Web app · Resolutions: 1920×1080 and 1280×720 · Language: Albanian

Overview

Pishpirik is a traditional Albanian two-player card game. The user plays against the computer, plays online against a random person without an account (“Luaj me dikë”, cross-play with phones, computers and other TVs), or signs in and plays online with friends added by username. The whole app is operated with the remote control.

Remote key	Action
Arrow keys	Move the gold focus frame between buttons, fields and the cards in your hand
OK	Activate the focused button / play the focused card
BACK	Close the open dialog (in the player search: cancel the search); in a game return to the menu; on the start screen exit the app (webOS platformBack)
Magic Remote pointer	Focus follows the pointer; click = OK

No in-app purchases. No advertising. No adult content (rated 12+ because of the optional text chat in online games).

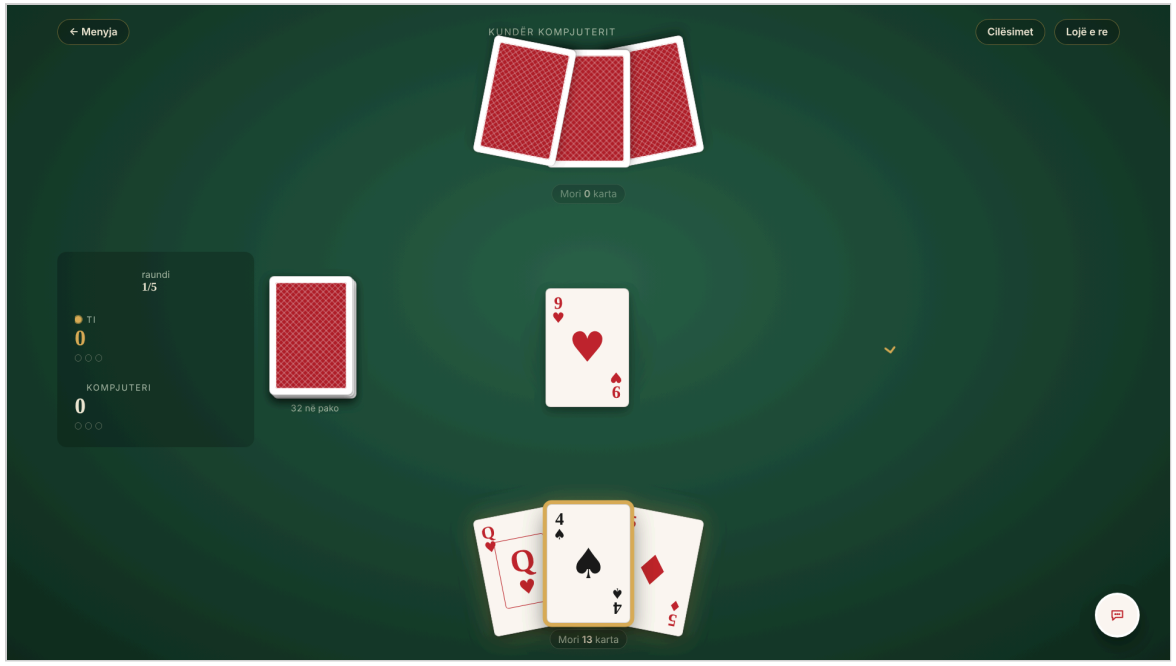

1. Start screen

Shown at launch. Focus starts on **“Luaj me CPU”** (Play vs computer).

- **Luaj me CPU**: opens round selection, then starts a game vs the computer. No login.
- **Luaj me dikë** (Play with someone): searches for another person who pressed the same button on any device. No login. See section 5.
- **Kyçu / Krijo llogari**: log in or create an account (username + password) for playing with friends.
- **Gear icon** (top right): Settings.
- **BACK**: exits the app.

2. Game table

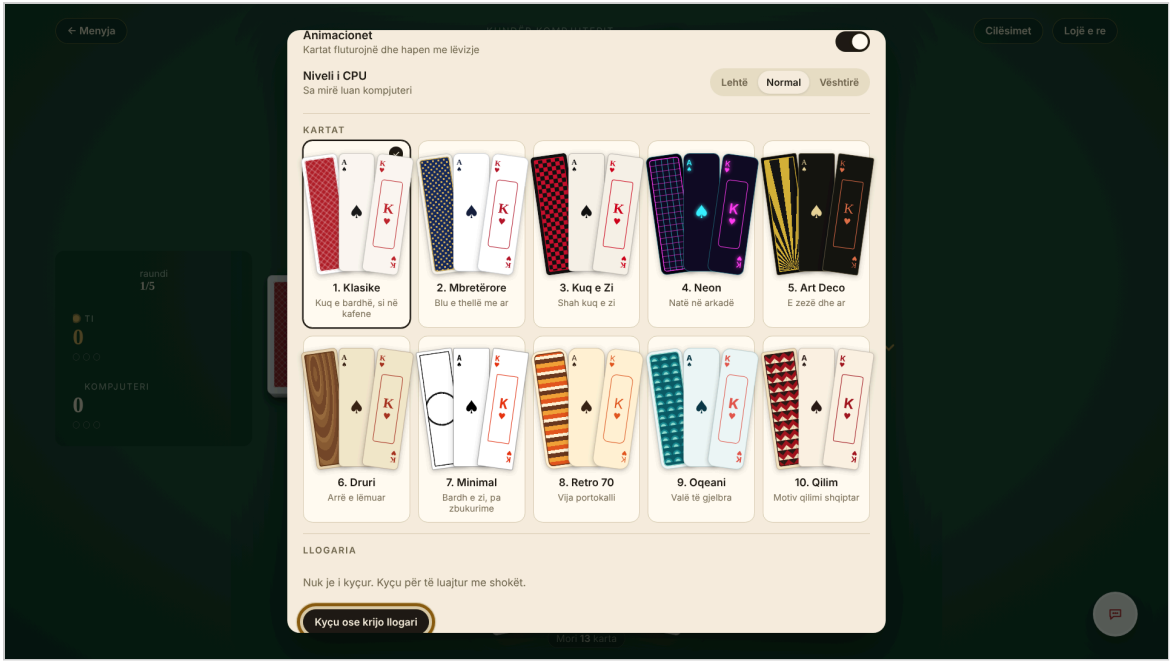

Left: score and round. Top: opponent's cards (face down). Middle: deck and pile. Bottom: your hand.

- LEFT/RIGHT choose a card, OK plays it onto the pile.
- Same rank as the top card, or a Jack, captures the pile. Capturing a single card = “Pishpirik!” (+10).
- UP reaches **Menyja** (menu), **Cilësimet** (settings) and **Lojë e re** / **Lëre lojën**.
- Chat button (bottom right) is only for online games.
- BACK returns to the start screen (in an online game against a random person this also leaves the game).

When the round ends a summary dialog shows the points; OK starts the next round.

3. Settings

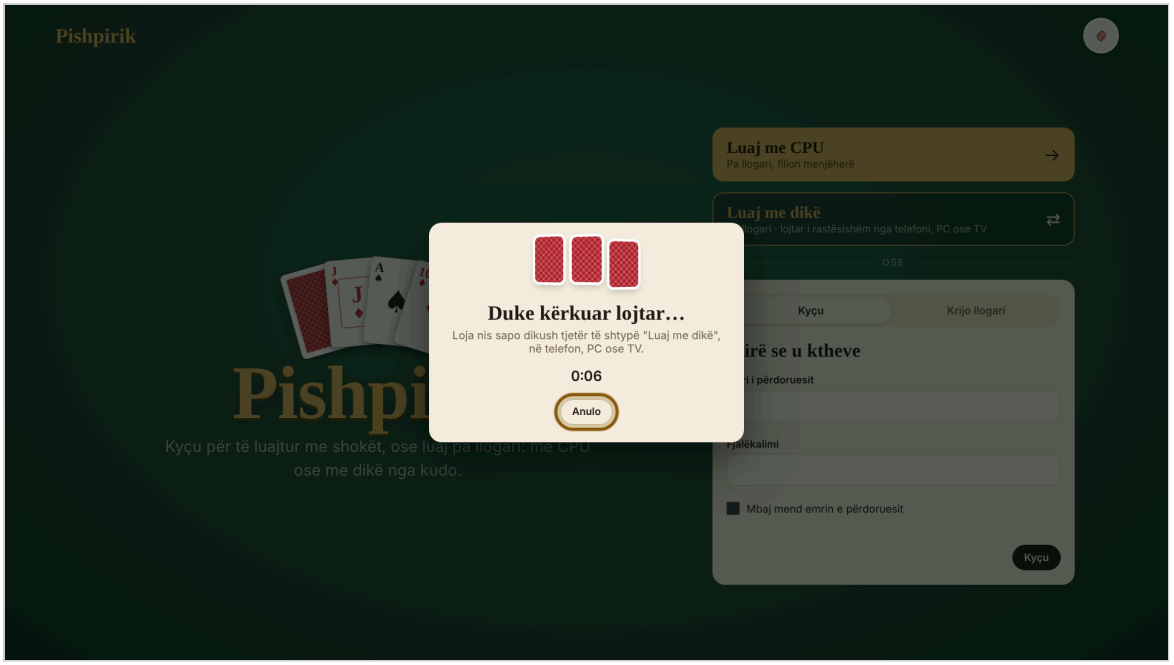

- Sound on/off, volume, 5 sound styles.
- Card highlight hints, animations, computer difficulty (easy / normal / hard).
- 10 card designs.
- Account: change password, log out.
- “Gati” or BACK closes the dialog.

4. Rules

Opened from Settings → “Rregullat e lojës”. Explains the rules in Albanian. “Mbyll” or BACK closes it.

5. Play with someone (no account)

1. Start screen → DOWN to **“Luaj me dikë”** → OK. The search dialog shows a timer; focus is on **“Anulo”** (Cancel).
2. On a second TV, a phone or a PC browser (https://pishpirik26.github.io/pishpirik/) press **“Luaj me dikë”** as well. Within a few seconds the game starts on both devices (3 rounds).
3. If nobody else is searching the dialog keeps waiting (there is no computer fallback). OK on “Anulo” or BACK cancels the search.
4. Players are shown with a generated name, e.g. “Lojtar 4F2K”.

6. Login and online play with friends (optional)

Accounts are only needed for playing with friends. Sign-up is free and instant inside the app: it needs only a username and a password, no e-mail or personal data, so the tester can create the test accounts directly.

1. Start screen → tab **“Krijo llogari”** (Create account) → enter any username (3–16 letters/numbers, e.g. lgqa1) and a password (6+ characters) twice → OK on **“Krijo llogarinë”**. The friends screen opens.
2. On a second TV or a PC browser (https://pishpirik26.github.io/pishpirik/) create a second account the same way (e.g. lgqa2).
3. Account 1: in **“Shto shok”** type the second username → **“Shto”**. Account 2 accepts the friend request in **“Të kanë shtuar”**.
4. Account 1 selects the friend and sends a game invitation, choosing the number of rounds. Account 2 accepts it in **“Ftesa për lojë”**. The game starts on both devices.
5. During the game the Chat button (bottom right) opens quick emoji, phrases and short text.
6. Settings → Account: change password or log out (“Dil”).
